Agent-based Software Engineering

Session 2 : Methodologies for agent-based analysis and design

Behrouz Far

Schulich School of Engineering, University of Calgary

far@ucalgary.ca

<http://www.enel.ucalgary.ca/People/far/>

Course Curriculum

Overview of agent-based SE

Methodologies for agent-based analysis and design

Agent communication & knowledge sharing

Agent-based System Architecture & Organization

FIPA: Foundation for Intelligent Physical Agents

Principles of Object Technology

Other topics:
Agent Interaction,
Infrastructure, APIs,
Performance metrics,
Learning,
Self-organizing systems
etc.

Multi Agent system Development

What do we need to develop an agent-based system?

Agent-based development *methodology*

- How to analysis and design a multi-agent system?
 - e.g., GAIA, Tropos, Prometheus, etc.

Agent-based development *platform*

- How to implement a multi-agent system?
 - e.g., FIPA-OS, Jade, Jive, Aglets, etc.

Introduction (contd.)

- time ↓
- Evolution of software engineering paradigms:
 - Assembly languages
 - Procedural and structured programming
 - Object Oriented programming
 - Component-ware
 - Design patterns
 - Software architectures
 - ...
 - **Software Agents**

Languages that have their conceptual basis determined by machine architecture

↓
Increase of Complexity

Languages that have their key abstractions rooted in the problem domain

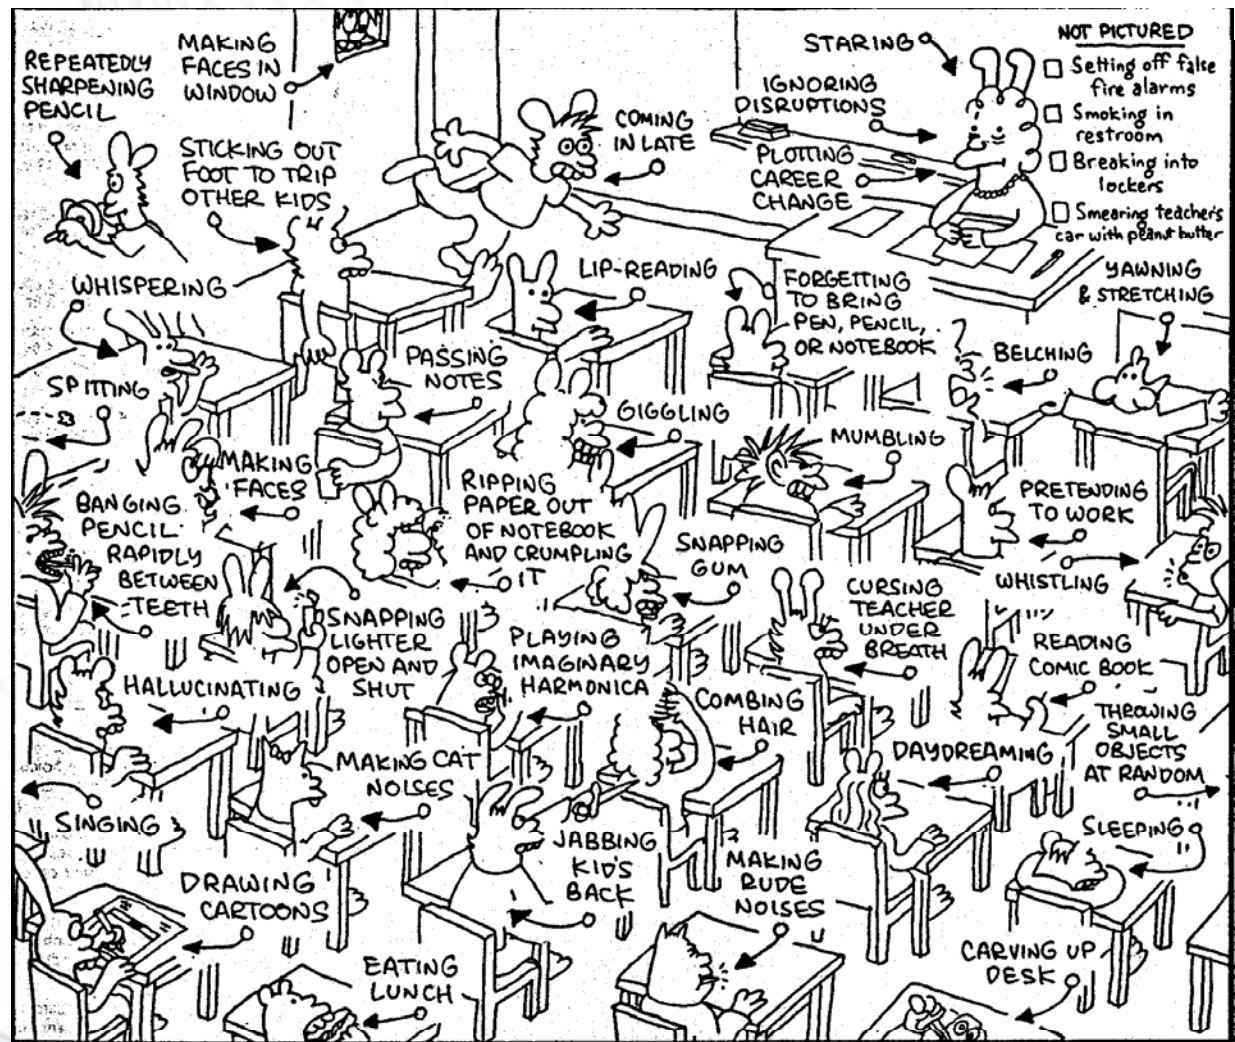

Why We Need This?

- The authors have devised a methodology that has been specifically tailored to the analysis and design of agent-based systems.
- Why we need this?

Why We Need This? (contd.)

- The way Object Oriented systems are designed
- Objects and their “pre-defined” interactions are designed
- Behaviour is the result of objects interactions

Why We Need This? (contd.)

- The way agent-based systems are designed
- Agents, their “roles” in the society, “goals” and “possible” ways of interactions are defined.
- Behaviour is the result of agents interactions

Why We Need This? (contd.)

- Existing software development methodologies are rather unsuitable for agent based software engineering tasks
- There is a fundamental mismatch between the concepts used by object-oriented developers and the agent-oriented view. They fail to adequately capture
 - Agents' flexible, autonomous (problem-solving) behaviour
 - Richness of agent interactions
 - Complexity of an agent system organizational structures

Contents

- **Session 2 : Methodologies for agent-based analysis and design**
 - A Methodology for Agent-Oriented Analysis and Design (GAIA)
 - Tropos
 - The MASSIVE Development Method
 - Comparison of development techniques
